

EMMA SMITH

PROJECTS

EfficientGAN

Developed techniques to optimize GANs for resource-limited environments. Available at github.com/efficientgan

ML Efficiency Toolkit

Contributed to tools enhancing machine learning training processes. Available at github.com/ml-efficiency-toolkit

KEY ACHIEVEMENTS

🏆 Research Paper Award

Received Best Paper Award for a publication on generative models, influencing industry standards.

🏆 Innovation Grant

Secured \$150,000 grant for innovative ML research project, facilitating groundbreaking experiments.

♥️ Efficiency Champion

Increased model inference speed by 25%, acknowledged through an efficiency award from the technology team.

★ Collaboration Excellence

Led joint project with top-tier university, resulting in impactful research and new scientific insights.

SKILLS

Generative Models, Machine Learning Optimization, Distributed Systems, Python, TensorFlow, PyTorch

TRAINING / COURSES

Advanced Deep Learning Specialization

Provided by Coursera, focused on cutting-edge deep learning techniques and scalable implementations.

AI Research Scientist | Generative Models | ML Optimization

SUMMARY

With 7 years of experience, I specialize in generative models and ML optimization, having achieved significant research milestones. Proficient in scaling ML workloads, I am eager to contribute to developing and refining world-class AI models while driving innovation.

EXPERIENCE

Machine Learning Scientist

05/2020 - Present

NVIDIA

Santa Clara, CA

- Enhanced existing generative algorithms leading to a 30% increase in processing speed, resulting in improved model efficiency.
- Collaborated with a team to benchmark and optimize ML infrastructure, achieving a 25% reduction in operational costs.
- Published three first-author research papers in top-level AI conferences, expanding the company's academic footprint.
- Managed concurrent large-scale model training projects, optimizing schedules and resources to shorten cycle times by 40%.
- Spearheaded the deployment of a novel AI model, subsequently boosting accuracy in predictive analytics by 15%.
- Drove strategic initiatives to implement distributed systems for training large models, enhancing scalability by 50%.

AI Researcher

06/2017 - 05/2020

Google AI

Mountain View, CA

- Conducted research on state-of-the-art generative models, contributing to the successful improvement of model accuracy by 20%.
- Developed and optimized a publicly available dataset, increasing access to quality data for the ML community.
- Collaborated with cross-functional teams to integrate existing ML methodologies, achieving a 15% increase in computational efficiency.
- Led a team to execute high-stakes model training experiments, cutting down time-to-completion by 30% through parallel processing techniques.
- Presented findings at international conferences, improving visibility and impacting ongoing collaborations in AI research.

Data Scientist

04/2015 - 06/2017

Intel Corporation

Folsom, CA

- Devised machine learning solutions enhancing data processing pipelines by 20% within electric component manufacturing, supporting faster production cycles.
- Implemented machine learning algorithms that increased predictive modeling accuracy by 10%, aiding strategic decision-making.
- Contributed to the development of an internal tool enhancing data analysis capabilities for the research team leading to 15% time savings.
- Analyzed large datasets to identify patterns leading to process optimizations, directly impacting efficiency and reducing costs by 12%.

EDUCATION

Master of Science in Computer Science

01/2013 - 01/2015

Stanford University

Stanford, CA

Bachelor of Science in Mathematics

01/2009 - 01/2013

University of California, Berkeley

Berkeley, CA
